Energy & Sustainability Risk Management Services

Energy & Sustainability Services: Energy markets are volatile and uncertain while operational requirements for energy management processes challenge existing organizational structures. ProSidian's Energy & Sustainability Risk Management Services transcend conventional service providers. We are trusted advisors that advocate a Structured Approach To Managing Energy tailored to the needs of our clients and based on company risk tolerance. ProSidian associates have been in the business of structuring and procuring energy supply for industrial and large commercial customers since 1996.

Reducing Energy Related Costs For Business, Associations, & Energy Consumers

ProSidian provides energy management and sustainability services to organizations in a wide range of industries. Our Energy & Sustainability Risk Management Services respond to client requests to "Keep Us Out of Trouble" and "Make Our Business Better".

Many companies are largely focused on day to day operations, while others are managing safety and security initiatives; however energy and sustainability impacts the ability to manage costs, increase efficiency and maintain compliance.

With continual monitoring of physical, financial, regulatory and legislative events impacting the energy markets, the experience of the Associates and Senior Fellows help reduce electricity, natural gas, and other energy related costs for businesses, associations, and energy consumers.

Industry Experience & Objective Solutions

ProSidian has deep and broad experience and expertise in the deregulated energy markets across the United States. ProSidian has worked with clients in every state that has deregulated its electricity and natural gas market.

Our Energy Advisors, Tariff And Regulatory Specialists, Financial Professionals Complement & Extend Your Ability To Achieve That Competitive Advantage. Energy market presence gives clients "real-time" access to competitive pricing from qualified suppliers nationwide.

At ProSidian, we identify opportunities and help you maximize cost reductions with a broad range of solutions in both regulated and deregulated energy markets.

Services Used By Utility Intensive Organizations To Reduce Energy Usage & Manage Cost

Our team of energy experts support portfolio reviews, assessment, and management while negotiating energy supplier contracts to identify ways reduce energy consumption.

Our audit, tariff optimization, procurement, carbon benchmarking, web-based data management, and consulting services are used by businesses and utility intensive organizations to reduce energy expenditures, improve risk management and implement sustainability/carbon reduction programs. ProSidian analyzes pricing and tariff rate information, and negotiates contract terms and conditions for each customer location.

Sustainability Services

Our audit, tariff optimization, procurement, carbon benchmarking, web-based data management, and consulting services are used by businesses and utility intensive organizations to reduce energy expenditures, improve risk management and implement sustainability/carbon reduction programs.

Energy & Sustainability Risk Management Services

Assess – Where You Are And Where You Want To Go

We begin by determining where you are and where you want to go. We help you and your key stakeholders identify your goals—like making the enterprise more energy and resource efficient, reducing carbon disclosure risks and engaging your employees in an overall sustainability program.

We help identify issues, quantify your goals and develop a vision of the future shared by every business and department. Our base-lining service uses accepted accounting principles to accurately account for your energy use and Green House Gas (GHG) emissions.

Our structured approach identifies where to get the best information and how best to capture it. **We help you set up a framework for ongoing collection and reporting resource information accurately and fairly.**

Transform – Implementing The Recommendations Of Our Experts

Implementing the recommendations of our experts will improve energy sustainability and reduce costs across the enterprise. Today's leading organizations recognize that energy & sustainability is essential to their business strategy.

A broader, more strategic plan for can not only drive efficiency and innovation across the enterprise, but also increase the bottom line and satisfy regulatory pressures as well as heightened shareholder expectations.

Many companies are largely focused on day to day operations, while others are managing safety and security initiatives; however energy and sustainability impacts the ability to manage costs, increase efficiency and maintain compliance.

We audit your facilities to gather the information required for analysis to give energy managers the tools they need to make better, more informed decisions on managing costs in their operations. **We document our approach, transfer knowledge to ensure success, and help you execute on a successful strategy.**

Roadmap – Develop The Roadmap To Get You Where You Want To Go

We help Develop the roadmap to improve the energy efficiency and the cost of energy for your facilities—both in operations and the enterprise as a whole. We begin with the high-level goals established for your organization based on your usage profile.

Then we help you develop tangible and actionable plans to reduce energy use, GHG emissions, and manage the costs of buying the energy you use.

We identify inefficiencies. And we show you how to improve and how much you'll save. Based on your facility usage, we analyze energy consumption patterns, identify inefficiencies and quantify associated costs. **We make recommendations for improving efficiency and reducing costs.**

Optimize – Your Energy Portfolio Position Based On Energy Market Conditions

Once you reach your initial goals, our energy advisors help you continually track and improve your energy operations. We monitor and report your energy and sustainability on an ongoing basis. This lets you track your usage to see when and where you need to improve.

The service uses utility data management technology we provide. And it enables near-real-time graphical visualization of energy usage at the sub-meter level. We analyze inputs including energy usage and examine industry-specific components of your operations for areas to optimize your energy portfolio.

Sustainability, coupled with traditional risk identification and analysis tools, gives managers the information they need to make better, more informed decisions on an array of risks, including energy and sustainability issues. We help you manage costs and improve stakeholder value. **We work with clients to address both the facility and process level, so you know where to target improvements.**

Energy & Sustainability Risk Management Services

An Integrated Approach

ProSidian Consulting's approach to Energy & Sustainability Risk Management centers on high-level approaches that drive program success with structured process backed up by the right solutions for people, process and technology. We provide Energy & Sustainability stakeholders with hands-on support and advisory services for strategic program management and tactical support across the operations lifecycle.
